**CarpalAid
Media Kit**

CarpalAID Media Kit

CarpalAID is a revolutionary product for the quick and effective relief of symptoms associated with Carpal Tunnel Syndrome (CTS). We are proud to have created a product that works quickly and brings no side effects to the user. CarpalAID has been through multiple clinical trials, is registered with the FDA, and has been approved by the FSA and the HAS.

CarpalAID is a clear patch that can be placed on the palm of the hand for nearly instant relief of CTS symptoms. It is safe for all patients to use and can even be used daily at home, at work, on vacation, or even while sleeping. We're incredibly proud to have created an all-natural, drug-free method of treating CTS symptoms in minutes!

About Carpal Tunnel Syndrome

Carpal Tunnel Syndrome, or CTS, is sometimes also referred to as “median nerve compression.” We all have a median nerve that travels from the forearm to the hand through a passageway called the carpal tunnel. When this median nerve has pressure constantly applied to it, whether through repeated use or injury, CTS occurs.

There’s no one set cause for CTS, and it impacts 1-5% of the adult population. Unfortunately, there aren’t many treatments available. Many people will use a wrist brace or avoid repetitive activities with their hands in order to decrease the symptoms, or some people may turn to NSAID pain relievers or corticosteroids for temporary relief, but more permanent relief often requires surgery.

How CarpalAID Works

CarpalAID is a nearly invisible patch that can be placed on the hand right above the thumb. It works by gently lifting the median nerve to relieve the pressure that causes CTS and, therefore, relieves the symptoms! Users feel results within minutes and can use CarpalAID anywhere; many even choose to use it while they sleep to experience results the next day.

CarpalAID can be used in just three steps:

1
Wash and dry your hands.

2
Remove the strip on the back of CarpalAID to reveal the adhesive.

3
Apply slightly below the thumb over the median nerve and press firmly.
